Course Description
This course examines the philosophy and science of law as tools of social engineering. Students will be introduced to tort, contract, property, criminal, civil, and constitutional law and will review different schools of thought and legal movements specific to these areas of law. Current legal developments (including decided Canadian cases) will be covered to illustrate how concepts such as risk, negligence, neighbor principle, contractual obligations, offer and acceptance, consideration, remedies and punishment play out in contemporary Canadian society.

Course Objectives/Learning Outcomes
This class was conceived as an immersive, dynamic, and interactive experience with the goal of preparing students to respond creatively to the pressures that will be placed on the process and philosophy of law and lawyering in the future. This class takes the position that one must obtain a broad consciousness of law in order to better understand the relationship between law, authority and power, law and reason and the nature of politics in both ancient and modern understandings. Consequently, this course selects a case studies approach as its tool and adopts integrative learning strategies to encourage students to develop a historical conscientiousness of the western legal process, tradition, and philosophy.

1. **Critical Commentaries (15%) | Due: Throughout the Semester**
   You are required to submit to D2L six (6) 400-700-word (approx.) commentaries of what you learned over a particular week.
