This symposium examines the mobilities of talent and knowledge amongst several Asian Pacific countries including Australia, Canada, China, India, and Singapore. Fuelled by economic and cultural globalization and a growing complex global economy with advanced transportation technologies the mobilities of people, information and knowledge across national boundaries has increased tremendously in the past half century. These mobilities of talent, knowledge, and information include such phenomena as international student mobility, highly skilled professional and faculty mobility, brain circulation, the internationalization of education, and university partnerships.

**PRESENTATIONS**
